

Figure 1 displays 12 time series plots arranged in a 3x4 grid (with the last cell empty), showing various fishery metrics over time (Year, 1992 to 2000). The metrics are: SSB, biomass, cbiomass, U, catch, Recruitment, fish_number, shing_mortality, weight, maturity, catch_number, and natural_mortality. Each plot shows multiple lines representing different sensitivity levels (0, 1, 2, 3) and a base case (NA). The y-axis is labeled 'value' and the x-axis is labeled 'Year'.
